

# Sales Insights Dashboard: A Data Storytelling Report

This report uses data visualisation and storytelling techniques to explore the SampleSuperstore dataset and reveal actionable business insights.

## Top 10 Products by Sales

This bar chart displays the ten products with the highest total sales in the SampleSuperstore dataset, highlighting which products contribute most to overall revenue. Insight: A clear majority of sales are driven by a handful of products-particularly Phones and Chairs-showing where focus on inventory, promotions, or customer engagement can yield the greatest returns. Products further down the list present opportunities for targeted boosting to diversify revenue streams.

## Sales Breakdown by Category and Sub-Category

The treemap visualizes sales by both main product category (such as Technology, Furniture, Office Supplies) and their sub-categories. The size of each box represents the sales volume for that category or sub-category. Insight: Sales are heavily concentrated in categories like Technology (notably Phones) and Office Supplies (with strong performance from Binders and Storage). Smaller or underperforming boxes highlight categories or products that may need re-evaluation or new marketing approaches to improve their contributions to total sales.

This analysis uncovers the company's core revenue drivers and emerging opportunities. By targeting high-performance states, focusing on top-selling products, and understanding segment shares, the company can design informed strategies for sustainable growth.

## Top Sales by State

This bar chart displays the total sales for each U.S. state, highlighting where the business earns the most revenue. Insight: States like California and New York are clear sales leaders, revealing where expansion strategies can build on current strengths. Midwest states lag behind and may need targeted marketing or investigation.

## Sales Shares by Segment

This pie chart illustrates the proportion of total sales attributed to each customer segment: Customer, Corporate, and Home Office. It shows the size and share of the company's market segments. Insight: The Consumer segment generates the largest share of sales, making it the primary revenue driver. However, the Corporate and Home Office segments-while smaller-represent growth opportunities that could benefit from dedicated strategies to increase their contribution and balance the sales portfolio.
